FAST RESOLUTION FOR SYSTEM STATUS AND HEALTH ISSUES

Vunetrix Network Monitor (VNM) continuously scans the status, activity, and performance of every IP-based security device on your security network. By making system status and health visible and easily understandable, VNM speeds time to resolution, mitigates risk, and enables more effective management.

THE SMART APPROACH

ASSESS
See and Understand System Performance

ALERT
Detect System Health Issues

ACT
RESOLVE System Issues Rapidly and Effectively

ASSESS
SEE AND UNDERSTAND SYSTEM PERFORMANCE

VNM's highly visible dashboard offers unprecedented visibility into the status and performance of all IP-based security devices, as well as the security network as a whole. Color-coding and graphic representation make it much easier to understand the normal state, so technicians and Security officers can establish benchmarks and thresholds as well as alerts to be triggered if those thresholds are breached.

ALERT
DETECT SYSTEM HEALTH ISSUES

The real-time alerting system serves as a "check engine" light for security, providing highly detailed notifications of specific system health issues.

- Device Data Traffic Throughput
- Critical Service Failure
- ON / OFF
- Device Website Access
- Access Control
- Hard Drive Failure

ACT
RESOLVE SYSTEM ISSUES RAPIDLY AND EFFECTIVELY

Armed with a deeper understanding of the security system in its normal state, coupled with real time alerting in granular detail, technicians and Security professionals can respond to system status and health issues with contextual knowledge. In other words, with VNM, the right information gets to the right people quickly for a collaborative response before your environment is further compromised.

Making the invisible, visible.

VUNETRIX NETWORK MONITOR ARCHITECTURE

The complete Vunetrix Network Monitor (VNM) solution includes patented Core hardware and Probe software. The Probe software pings devices to collect health and performance data and communicates security with the Core – which processes device metrics and alerts, stores data, and authenticates/controls users and groups. All of this system health and status information is made visible and actionable via the Vunetrix SMART Dashboard.

REPORTING

Vunetrix enables technicians and Security professionals to create sharable documentation of how the security system is performing as well as any issues that arise and the resulting resolution.

Reporting Capabilities

- Automated or on-demand
- Daily, weekly, or monthly data windows

Benefits

- Demonstrates the value of security investments
- Provides historical data to improve budgeting and forecasting
- Helps address compliance mandates

DEPLOYMENT OPTIONS

SECURE HOSTED SERVICES

Vunetrix provides secure monitoring and support.

- SaaS - Internet-based
- No capital investment
- Pay only for what you use

ON PREMISE / LICENSED SOFTWARE

Client performs system health monitoring and support in-house.

- Ideal for highly secure/closed networks
- Installed on physical or virtual machine meeting minimum requirements
- Sold in bundles of sensors

Vunetrix is ideal for any business or organization with IP-based security equipment and critical infrastructure, a regulated environment, liability concerns, high performance and reliability demands, and siloed security departments.
